Nebulizer Instructions

Read these instructions carefully before using this device.

Step 1
After unpacking the device, check the compressor and accessories for the visible damage or defects such as cracks in the plastic housing which could expose electrical components. Contact your product distributor to report any damaged product.

Step 2
When taking a treatment, sit upright and relaxed.

Step 3
Place the compressor in a safe and accessible location. Plug the compressor into the electrical outlet.

Step 4
Pour your medicine into the medicine cup. Attach the top piece to the medicine cup and then attach the medicine cup to the mouthpiece or mask.

Step 5
Connect the tubing to the compressor then to the medicine cup. Attach the mouthpiece or mask to the medicine cup to the tubing.

Step 6
If using a mouthpiece, put the mouthpiece in your mouth between your teeth and close your lips tightly around it. If using a mask, put the mask over your mouth and nose.

Step 7
To start the treatment, switch the compressor ON by pressing the ON/OFF switch to the “I” position.

Step 8
Hold the nebulizer in an upright position to prevent spilling and to ensure the medication is correctly distributed.

Step 9
Take slow, deep breaths in through your mouth so the medicine can go deep into your lungs. Continue until all of the medicine is gone from the cup.

Step 10
When the treatment has been completed, switch the unit OFF by setting the switch position to “O” and disconnect the plug from the electrical outlet. If you have questions contact your healthcare provider.
