Stroke Patient Recovery and Rehabilitation

If you or a family member are recovering from a stroke, Home Care Medical is here to help. Since everyday activities like walking, dressing and bathing may now be challenging, Home Care Medical has many products available to assist in the rehabilitation of a person living with the limitations of a stroke. From wheeled walkers and shoe horns to bath transfer benches, we have the products and the knowledge to help increase a patient’s safety and independence in their home. Be sure to talk to a physician, physical therapist and/or occupational therapist about which assistive devices would benefit both the patient and the caregiver.

Patient Suggestions for a Successful Recovery

The following are suggestions for a patient who is recovering from a stroke:

– Be as active as you can in your care.
– Participate in a stroke rehabilitation program as soon as possible and ask a family member or friend to attend therapy with you.
– Recognize and treat any depression symptoms (which is a common emotional response).
– Ask for patience and encouragement from those who love you.

Home Care Medical — We are here to help
